Hyderabad, Telangana, India

## Technical Skills

|                     |                                                                                                                 |
|---------------------|-----------------------------------------------------------------------------------------------------------------|
| Languages           | Python (3.10–3.13), TypeScript, JavaScript (Node.js), SQL, Rust (basics)                                        |
| Backend Frameworks  | FastAPI, AsyncIO, RESTful API Architecture, Pydantic v2, WebSockets, Netlify Functions                          |
| Distributed Systems | Celery, Redis Task Queues, Circuit Breaker Pattern, Rate Limiting Buffers, Idempotency, Message Queues          |
| Databases & Storage | PostgreSQL, Supabase (RLS, Stored Procedures, Realtime), SQLite, Redis Caching, AWS DynamoDB/S3                 |
| DevOps & Security   | Docker, Docker Compose, Git, CI/CD, Nginx, Razorpay HMAC-SHA256, OAuth 2.0, JWT Authentication, AWS EC2, pytest |

## Professional Experience

|                                                                                                                                                                                                                                                                                                                                |                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Freelance Software Engineer</b><br><i>Independent</i>                                                                                                                                                                                                                                                                       | Aug 2025 – Present<br>Remote            |
| <ul style="list-style-type: none"><li>Architected asynchronous microservices with FastAPI and PostgreSQL, designing idempotent webhooks and background task queues.</li><li>Implemented strict Pydantic v2 data serialization contracts, connection pooling, and Docker Compose development/production environments.</li></ul> |                                         |
| <b>Data Science &amp; Backend Intern</b><br><i>Inikola Technologies</i>                                                                                                                                                                                                                                                        | Mar 2025 – Dec 2025<br>Hyderabad, India |
| <ul style="list-style-type: none"><li>Developed high-throughput FastAPI REST endpoints for real-time text analysis and configured AWS EC2 and S3 infrastructure.</li><li>Built relational database schemas and automated data preprocessing pipelines using PostgreSQL and Pydantic.</li></ul>                                 |                                         |

## Featured Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                            |
